

Prototype v0

Concierge nudge script - off-peak booking test

This artifact shows the exact WhatsApp messages sent to peak-only boutique fitness class attendees as part of the Concierge experiment testing Assumption #4 (target consumers have elastic routines and will shift given a non-price nudge). No app, booking system, or code exists yet - I manually play the role of the platform, sending these messages and coordinating each booking by hand.

Contents

- Page 2 - Why WhatsApp first, not an app
- Page 3 - Nudge A: priority access, shown as a short list of options

- Page 5 - Manual booking confirmation
- Page 6 - Intentional exclusions

Why WhatsApp first, not an app

The riskiest thing about this idea isn't the software - it's whether the underlying behavior is even real.

Assumption #4 says people will shift their schedule for a non-price nudge. That's either true or it isn't, and no amount of app polish changes the answer. Building the booking flow, the studio integration, or the matching logic before testing this would mean spending weeks of engineering on a guess.

A Concierge test lets me send the exact same kind of nudge a real app would show - a short, curated list of off-peak options - manually, over WhatsApp, and observe the same behavior an app would need to produce: does someone actually pick one, book, and show up. If the answer is no, no app would have fixed that. If the answer is yes, that's the evidence that justifies building one.

So: manual first, automated only once the behavior is proven.

Nudge A - Priority access

Non-monetary: a short list of off-peak options, manually curated, not a discount

online

Hi! I know your usual class runs at 7pm, but a few off-peak spots opened up this week if you want first pick before they're posted publicly:

- Tue 11am Pilates
- Wed 2pm Yoga
- Thu 10am Spin

Want me to hold one?

09:14

oh nice, didn't realize there were that many options - maybe the Wednesday one

09:31

Good pick, it's a smaller class too - I'll hold your spot for Wednesday 2pm

09:33

Nudge B - Social accountability matching

Non-monetary: pairs the user with someone they know for the same slot

Mariana
online

Hey! Sara's going to Sculpt Studio's Tuesday 11am class this week - want me to add you to the same one? Could be a good excuse to catch up

16:02

wait really, I haven't seen her in forever

16:20

Yeah! I'll add you both - same spot, 11am Tuesday

16:21

Manual booking confirmation

Sent once the user says yes - no booking system exists, this is a manual message

Mariana
online

You're set - Wednesday 2pm Yoga, Sculpt Studio. Just show up and give them your name at the front. I'll check in after to see how it went

16:24

sounds good, thanks for setting it up

16:25

Intentional exclusions

To keep this test minimal and code-free, the following were deliberately excluded from Experiment Card v0:

- Studio-side real-time calendar / API integration
- Payment processing
- Dynamic pricing or automated discounting logic
- A custom mobile or web app - outreach and booking are done manually via WhatsApp
- Automated matching algorithms - nudges are manually selected and sent per user
- Real-time availability tracking - the options listed are manually curated per message, not pulled from any live schedule or system

See evidence-log/experiment-card.md for the full Method, Metric, Threshold, and Decision rule.
